

# ABSTRACT

This disclosure is directed toward the devices called Lawn Care Booties, which are designed to provide protective coverings over various legging and shoe attire components. Tow elastic bands are strategically positioned to hold this type of overshoe to the wearer's legs while at the same time providing a protective covering from flying debris. Each bootie is composed of two separate complete sidepieces that are attached in a vertical line, creating both a tubular section and a foot-like section of the bootie. This basic structure allows the unique ability for the booties to be folded into very compact sizes for storage, washing clean if desired, or perhaps even be tossed into the garbage after usage.
